PROJECT SHOWCASE • CUSTOM OUTDOOR KITCHEN

From Vision to Reality

You bring the idea. We design it, build it, and make it real, from the first sketch to the final detail.

STEP 01

The Starting Point

Every great project begins with a vision.

Before: the client's covered patio, the space chosen for his outdoor kitchen.

Our client came to us with a dream: a custom outdoor kitchen where family and friends could gather around great food. What they had was an open covered patio overlooking his backyard, a blank canvas with plenty of potential.

We walked the space together, listened to his ideas, and began planning how to turn this patio into the outdoor BBQ area they had always imagined.

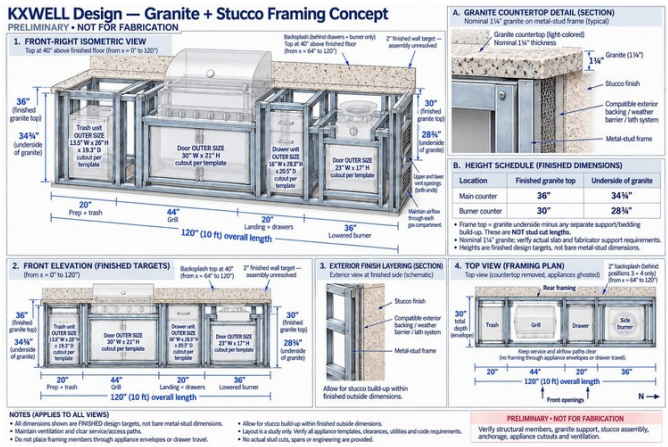

STEP 02

From Idea to Design

Your vision, engineered with precision.

3D design proposal with finished dimensions.

Framing and finish concept.

Working side by side with our designer, we translated our client's idea into a detailed, custom design. The proposal featured a 10-foot outdoor kitchen with a 38" built-in grill, a dedicated prep and trash station, a stainless steel drawer unit, and a lowered side-burner counter for comfortable cooking.

We also developed the construction concept: a durable metal-stud frame finished in stucco, topped with a 1" granite countertop and backsplash, with integrated ventilation to keep every gas compartment safe.

Every dimension, finish, and appliance was planned before the first cut. Once our client approved the design, our team got to work.

STEP 03

Building the Foundation

Built to last, from the frame up.

With the design approved, our crew brought it to life on site. We built the structure with a galvanized metal-stud frame, a material that resists rust, rot, and pests, making it ideal for outdoor use. Each section was measured and leveled with care, and the frame was fitted around the actual grill and appliances to guarantee a precise fit. Gas lines were routed through the cabinet before closing it in.

The frame was then sheathed in cement backer board, creating a solid, weather-resistant base ready for the stucco finish and granite countertop. Every opening was cut to the exact appliance specifications from our design.

Framing, leveling, appliance fitting, and cement board sheathing, step by step.

STEP 04

The Final Result

Your dream, delivered.

What began as an empty patio is now a fully custom outdoor kitchen, built exactly to our client's vision. The finished space features a 38" built-in stainless steel grill, a side burner, a pull-out trash and prep station, a three-drawer storage unit, and access doors for easy service.

A smooth stucco finish, a granite countertop with backsplash, and elegant metallic corner accents give it a clean, modern look that blends naturally with the home's architecture.

Today, our client has the perfect place to cook, entertain, and enjoy time with family and friends, just as they imagined it.

THE TRANSFORMATION

Before & After

Same space. A whole new way to live outdoors.

Have an idea? We'll bring it to life.

Whether you have a detailed plan, a simple sketch, or just an idea, KXWELL is ready to help. We design and build from scratch, guiding you through every step, from the first conversation to the final walkthrough. Tell us what you imagine, and we'll make it real.
